Reverse the signs of aging with cosmetic laser skin rejuvenation.

Laser Anti-Aging

Cosmetic lasers are proven to effectively treat the wrinkles, photo aging and skin discolorations that time and sun have wrought.

In addition to minimizing these imperfections, laser treatment also stimulates collagen production, making your skin appear more supple and full.

So even if the years have taken their toll, you can now easily turn the clock back.

How does it work?

Cosmetic laser treatments reverse the signs of aging and sun-damaged skin by stimulating collagen production and promoting tissue tightening through tissue coagulation.

Am I a candidate?

It's as simple as this—if your skin is showing signs of aging, then you are a candidate for laser treatment. Your doctor or practitioner can help you determine your specific needs.

Are there any side effects to treatment?

Anti-aging treatment should cause only minimal discomfort. Any redness, swelling or puffiness that occurs can be gone within a few days, if not a few hours.

How many treatments are required?

Results vary with each case. Patients may require anywhere from 2–6 treatments to achieve desired results. Each session will last from 15 to 30 minutes.

How long do results last?

Just like the aging process itself, this varies from person to person. However, if you take steps to protect and preserve your freshly rejuvenated skin—such as using SPF sunscreen, facial cleansers and creams—the results will last longer.
